

***Enhance your Novell Nsure Identity Manager!***

# **Pulsen SnapShot improves efficiency and reduces costs**

The meta directory is the modern IT system's hub and base for powerful identity administration. It's an excellent way of retrieving, administering and distributing information in various databases, and is rapidly winning ground at increasing numbers of municipalities, public authorities and businesses.

With Novell Nsure Identity Manager, you've invested in a powerful meta directory. When complemented with the integration module Pulsen SnapShot Identity Management Connector, you dramatically increase efficiency while significantly reducing costs. ►

## **PULSEN**

Strategic IT since 1964

### **Speedy synchronization**

SnapShot automatically synchronizes identity information between different systems and databases at unparalleled speed. Information changed or added at one location is quickly sent through SnapShot to other connected systems.

### **Role-based authorization**

With SnapShot you can always be sure that the right authorization requirements are in force, regardless of staff changes or changes to authorization rules.

### **Sees all**

SnapShot maintains a vigilant watch, frequently scanning connected systems, tracing changes to information and immediately updating the meta directory.

### **Reads all**

With broad platform support and communicative capabilities that span all system boundaries, SnapShot can retrieve and deliver information in users' various databases.

Connector offers compatibility with the ODBC and LDAP communication interfaces in one and the same solution. It also handles text files in most formats.

### **Requires no changes to original databases**

SnapShot doesn't make any expensive and complicated demands on the systems it interacts with. Data transfer is conducted continuously using a unique technology and on the terms of the connected systems.

This means that you don't have to change settings in original databases. You thus save time and expense while retaining a high level of security. Another important advantage is that you don't need to do anything that might influence your agreements or endanger your guarantees for other software.

### **Optimizes many types of systems**

SnapShot is already used by several businesses, municipalities, counties and other public authorities. It is a well-proven integration module for Novell's meta directory in, for example, personnel administration systems, payroll administration systems, reference systems, business systems, student administration systems and patient administration systems.

### **Simple implementation**

SnapShot's unique structure and interactive capabilities make implementation quick and easy. Smooth implementation without complications and wasted time is characteristic for SnapShot.

### **Low maintenance costs**

SnapShot provides extremely high operational reliability and has no effects on maintenance requirements for connected systems. SnapShot does its job—reliably and without causing problems for other systems.

### **Close to development and support**

With SnapShot, you get an Identity Connector that can be easily modified based on your changing needs and requirements.

We at Pulsen created SnapShot. We're also the ones who handle fine-tuning, development and constant adaptations based on market needs. Installation is conducted either by Pulsen or one of our authorized partners.
